Saw Unit
sturdy structure

Sliding Carriage
high cutting quality

Rip Fence
smoothness and precision

SCM
Thundercut
Optimizer/
Sequencer App

High construction quality for reliability and safe performance.

circular saws operating groups

always user friendly
and precise

Handwheels on the machine front

Ease-of-use in every day operation due to the dedicated gear box (**SCM solution**), fully protected from dust, that provides a smooth and direct transmission. Every minimum hand-wheel movement corresponds to a precise blade adjustment.

sturdy structure

Saw unit (class si x)

Saw unit $\pm 46^\circ$ with self-tensioning system of the transmission belt (SCM solution): performance and reliability with no compromise.

The saw blade lifting is carried out by a strong cast-iron structure with sliding on ground round slideways which guarantee the **best accuracy**. The unit tilting is carried out on cast-iron rotation sectors in a crescent shape to ensure reliability over time.

simple and effective

Scoring unit adjustment

Vertical and horizontal adjustments are carried out by user-friendly mechanical levers that operate directly making precise and smooth movements. The useful mechanical stops allow immediately finding of the set position. The positioning of the controls allows their use without moving from the front of the machine.

maximum cut quality guaranteed over time

Sliding carriage

The carriage will never require adjustment due to its closed reticular geometry with steel guides using an **exclusive method of mechanical fixing**.

Furthermore, the **“arc” profile of the class arch-ground steel slideways (SCM solution)** ensures:

- No play and loads four times higher than others
- +/-0,05 mm tolerance on the entire carriage length for straight and high quality cutting
- Sliding effectiveness over time, thanks to the particular guides positioning which ensures protection from dust

reliability and technology without comparison
10 years of SCM guarantee for the carriage sliding system.

smooth, rapid and precise positioning

Rip fence

Sliding of the rip fence support on round bar with micrometric adjustment.

The support can be also equipped with digital readout for fence position with detecting system on magnetic band (option). The fence can be easily excluded from the working area when it isn't used.

optimal support

Squaring frame and fence

Panel loading is easy on the large squaring frame with an idle roller at the end and the mobile cross beams offer an **optimal support** also to smaller panels. The telescopic squaring fence with the inclined metric scale and two reversible stops can be used to square panels measuring 3200x3800 mm and for tilted cuts at up to 45° on both sides of the frame.

programmable circular saws electronic controls

Technical specification at page 21

the practical advantage for automatic control of the main positions

Ready

The **programming** of the work becomes **simple and effective** with the electronic control with a 4" LCD display.

- Working mode: manual, semi-automatic and automatic with a memory capacity of up to 99 programs
- Tool data setting with automatic height adjustment
- Calculator and hour counter

			
Saw unit lifting	Saw unit tilting	Programmable rip fence (option)	Blade speed readout

the operating advantage for easy assistance

Easy

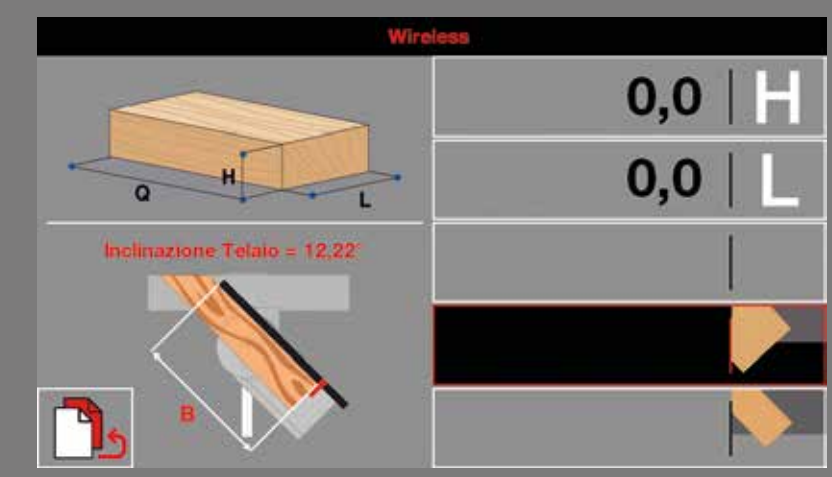

Maximum reliability due to the function pushbuttons and easy to use with the electronic control of up to 5 axes with the 7" LCD display, 16:9 format. Integrated and fast control of all dedicated functions. These features translate into immediate improvements in productivity and guarantees the capability of the full potential of the machine.

one cut only, the correct one

Operator's support

The large display suggests to the operator information for the correct use of any cutting configuration. In particular, it displays in real time the correct position of the stop on the basis of the known measurements of the work-piece (**SCM solution**).

Easy control can easily manage the inverter for the adjustment of the saw blade rotation speed and the scoring unit alignment.

speed and accuracy
Motorised programmable rip fence mounted on a recirculating ball screw mechanism with sliding on linear guides.
Only for Ready 3 Plus / Easy 3 Plus versions

maximum practicality
Pushbuttons integrated in the sliding carriage
 The possibility to start or stop the blades motors from the pushbuttons located at the ends of the carriage **considerably helps when machining large dimensioned panels.**
(option)

the innovation at the operator service
Automatic positioning system of the overhead protection
 The overhead protection automatically positions itself as a function of the blade using the **exclusive "AP system" (SCM solution).**
 This makes the transition from cuts with different angles even faster and safe, without the operator having to change the settings of the machine.
(class si x)

practicality and safety
Motorized programmable rip fence with steel cable and sliding on sturdy round steel bar.
 Position readout on magnetic band.
Only for Ready 3 version

circular saws main optional devices

Angular cutting devices

Available for the following versions

- a) traditional
- b) with automatic self-adjustment of the stops position in respect of the blade
- c) with automatic self-adjustment of the stops position in respect of the blade and electronic readouts for stop position and rule tilting angle

Rip fence unit

The exclusive referencing system for the first trim cut allows the setting of trim quantity to be cut for every **side without any test cuts**. Available also with electronic readouts.

Squaring frame with "Compex" device

with automatic self-adjustment of stops position in respect of the blade and rule tilting angle. Furthermore, thanks to the dedicated frame structure, it is possible to carry out **tilted cuts keeping the squaring rule comfortably within the operator's reach**, both in acute cuts and in obtuse ones, without renouncing to a valid support of the piece.

speed and precision

"Quick Lock" squaring fence with rapid release.

Minimum set-up time with the **SCM system that allows rapid fence positioning**. The extending roller and the stronger frame support maximise performance.

Fence for complementary cutting

Device to be applied directly on the squaring rule that allows to quickly carry out cuts with angles complementary to the rule one.

Electronic readouts on the squaring stops

The stops can be easily read even from distance.

circular saws main optional devices

Surface reinforcement treatment
For sliding table and mobile crossbars of squaring frame.
Dedicated to the intensive processing and particularly abrasive materials.

Extension with roller conveyor on parallel fence side,
for the support of large panels, and tools-holder
to have the tools always within reach.

Mechanical preset for "DADO" machining
Possibility of using a tool (not included)
to replace the main blade,
with 203 mm maximum
diameter and 20 mm
maximum thickness.

circular
saws
main
optional
devices

Tablet holder on the sliding carriage
Compatible with tablets from 8" to 11".

Adjustable tablet holder positioned on the mobile control panel
Compatible with tablets from 7" to 13".
It is equipped with USB port for power supply positioned
on the mobile control panel.

**circular
saws
main
optional
devices**

Blades-holder drawer integrated in the machine's frame
It is made of 4 shelves, customizable with labels, for the easy replacement of the blades.

"Pro-Lock"
System for the main blade rapid locking with fast and tool-less riving knife adjustment.

Expandable scoring blade
Manually expandable with variable thickness from 2,8 to 3,6 mm.
Blade diameter: 120 mm (160 mm for *class si x*)

"LED indicating scoring unit in operation" device
When the scoring blade is working, the high efficiency LEDs clearly indicate the danger area, making the machine safer than ever.

Pneumatic presser

Particularly suitable for the cutting of thin materials.

Second extension with sliding rail support

to safely support panels for large dimension and weight.

Advanced materials machining

PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials. Corian and other composite materials. Aluminium, brass and other light metals.

Device for the blade micro-lubrication

Compulsory for the machining of light alloys, extremely useful with particular plastic materials.
